EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. As per MPEP 713.04, a separate interview summary form is not provided as the substance of the interview has been summarized herein.

Authorization for this examiner's amendment was given in a telephone interview with Anthony England (No. 35,129) on August 19th, 2008.

The application has been amended as follows:

Please amend Claims 49, 53 and 57 as follows:

49. An apparatus comprising:

a processor; and

a storage device connected to the processor, wherein the storage device has stored thereon a program, wherein the processor is configured to execute instructions of the program to implement a method comprising the steps of:

updating, at successive update times, virus definitions for resources stored on a data processing system;

scanning the resources for viruses in first and second scanning instances responsive to the virus definitions updated at respective first and second ones of the update times;

computing hash values for the resources at the first and second update times;

classifying each of the resources as higher or lower priority responsive to whether the hash values for each resource are equal for the first and second update times and whether the scanning determines each resource is virus free in both the first and second scanning instances;

Art Unit: 2135

determining a scanning interval from a time of the first scanning instance until a time of the second scanning instance;

updating the virus definitions at a next update time; and

scanning resources for viruses in a next scanning instance responsive to the virus definitions updated at the next update time, wherein in the next scanning instance the ones of the resources classified as higher priority are scanned and the scanning of the higher priority resources in the next scanning instance includes scanning i) resources determined to be virus free in both the first scanning instance and the second scanning instance but not having equal hash values in the first and second update times, ii) resources determined to be virus free in both the first scanning instance and the second scanning instance and having equal hash values in the first and second update times but wherein the scanning interval is less than a predetermined threshold, iii) resources determined to be virus free in the first scanning instance and having equal hash values in the first and second update times but wherein the scanning interval is less than a predetermined threshold, and iv) resources determined to be virus free in the second scanning instance but wherein the scanning interval is less than a predetermined threshold.

53. A method comprising the steps of:

updating, at successive update times, virus definitions for resources stored on a data processing system;

scanning the resources for viruses in first and second scanning instances responsive to the virus definitions updated at respective first and second ones of the update times;

computing hash values for the resources at the first and second update times;

classifying each of the resources as higher or lower priority responsive to whether the hash values for each resource are equal for the first and second update times and whether the scanning determines each resource is virus free in both the first and second scanning instances;

Art Unit: 2135

determining a scanning interval from a time of the first scanning instance until a time of the second scanning instance;

updating the virus definitions at a next update time; and

scanning the resources for viruses in a next scanning instance responsive to the virus definitions updated at the next update time, wherein in the next scanning instance the ones of the resources classified as higher priority are scanned and the scanning of the higher priority resources in the next scanning instance includes scanning i) resources determined to be virus free in both the first scanning instance and the second scanning instance but not having equal hash values in the first and second update times, ii) resources determined to be virus free in both the first scanning instance and the second scanning instance but wherein the scanning interval is less than a predetermined threshold, iii) resources determined to be virus free in the first scanning instance and having equal hash values in the first and second update times but wherein the scanning interval is less than a predetermined threshold, and iv) resources determined to be virus free in the second scanning instance and having equal hash values in the first and second update times but wherein the scanning interval is less than a predetermined threshold.

57. A computer program product including a tangible, computer readable medium, said computer readable medium having instructions stored thereon for execution by a computer system, wherein the instructions, when executed by the computer system, cause the computer system to implement a method comprising the steps of: updating, at successive update times, virus definitions for resources stored on a data processing system;

scanning the resources for viruses in first and second scanning instances responsive to the virus definitions updated at respective first and second ones of the update times;

computing hash values for the resources at the first and second update times;

classifying each of the resources as higher or lower priority responsive to whether the hash values for each resource are equal for the first and second update times and whether the scanning determines each resource is virus free in both the first and second scanning instances;

Art Unit: 2135

determining a scanning interval from a time of the first scanning instance until a time of the second scanning instance;

updating the virus definitions at a next update time; and

scanning the resources for viruses in a next scanning instance responsive to the virus definitions updated at the next update time, wherein in the next scanning instance the ones of the resources classified as higher priority are scanned and the scanning of the higher priority resources in the next scanning instance includes scanning i) resources determined to be virus free in both the first scanning instance and the second scanning instance but not having equal hash values in the first and second update times, ii) resources determined to be virus free in both the first scanning instance and the second scanning instance but wherein the scanning interval is less than a predetermined threshold, iii) resources determined to be virus free in the first scanning instance and having equal hash values in the first and second update times but wherein the scanning interval is less than a predetermined threshold, and iv) resources determined to be virus free in the second scanning instance and having equal hash values in the first and second update times but wherein the scanning interval is less than a predetermined threshold.

3. The following is an examiner's statement of reasons for allowance:

The Examiner notes that an office action appendix has been attached hereto which contains a copy of the interview agenda submitted by the Applicant on June 24th, 2008 regarding how the new features introduced into the current set of claims are supported by the original specification. Furthermore, the arguments submitted on June 20th, 2008 have been considered and are persuasive, in particular those remarks found on pages 10-12. Thus in light of the attached interview agenda and the submitted arguments, the claims are deemed allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
